

Maximizing efficiency; how smart data-driven campaigns made the entire organization of RRS 20% more effective

Friends of Search 2023.

Introduction

Gerdo Wolbers
Marketing manager at RRS

Dennis Westerbeek
SEA specialist at RRS

Business organization

Riool Reinigings Service (RRS) is the **specialist for sewage systems**. RRS is market leader in the Netherlands with 12 branches and over 300 service engineers.

An important part of our service is optimal accessibility & availability. RRS works for this with telephone operators who schedule service engineers per region. It is also possible to schedule an appointment on the website.

Business challenges

1. Targeting our preferred audience with our ads.
2. Spending media budgets only on locations and times that best match the work inventory and need.
3. Reducing carbon footprint by optimizing driving time of our service engineers.

Our main goal is using marketing budgets more efficiently and targeted in order for RRS to better carry out its work.

Objectives

RRS faced two problems that needed solving:

1. Making sure as little budget and clicks as possible go to postal codes of rental properties.
1. Using the already scarce number of service engineers as efficiently as possible.

In addition, RRS aims for a healthy annual growth of **10%** in a competitive and saturated market with a large share of unscrupulous companies.

Location Targeting

Based on CBS data.

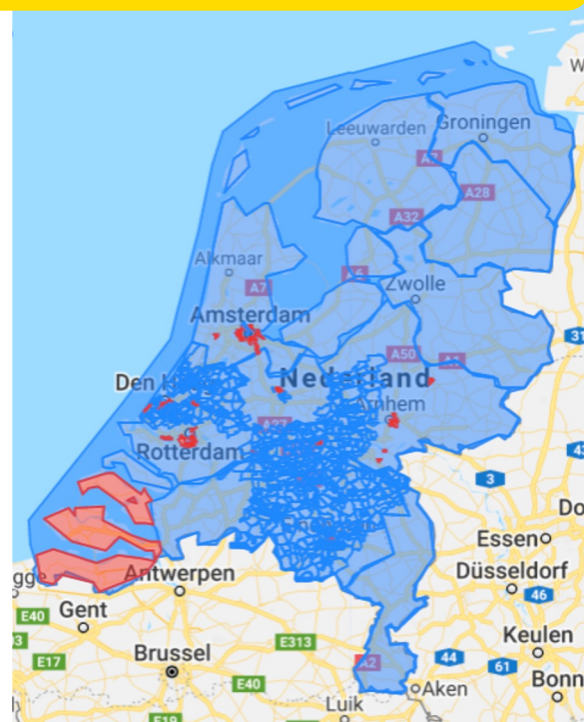

BY DDMA | [job.....](#)

Location targeting using CBS data

The first step in minimizing rental property postcodes in campaign targeting has been resolved by importing CBS data (Central Bureau for Statistics).

This excludes postcodes where at least **80%** of the properties are rental properties.

Postcode-4 PC4	Google	Inwoners			
		Totaal	Eigendom		
Code	Google	Totaal INWONER	Huurwoning P_HUURWON	Koopwoning P_KOOPWON

1102	1102	74775	80	20	

Optimization appointment module

Improving CVR and reducing phone calls.

Appointment module

Goals for the new appointment module:

1. Better attuning demand to (local) capacity
2. Encouraging the use of the online module instead of making appointments by telephone
3. Achieving better use of the advertising budget by collecting the right data

Old appointment module

New appointment module

The screenshot shows the first step of the appointment process. At the top left is the RRS logo (Rijks Register van de Gereguleerde Rechtspraak) and the phone number 088 030 13 13. The title is 'AFSPRAAK MAKEN VERSTOPPING'. The main heading is '1. WAT IS UW POSTCODE?'. Below it is a sub-heading: 'We zoeken naar de eerst beschikbare datums in uw regio. Vind in een paar stappen een geschikt tijdblok.' There are three input fields: 'Postcode' with the value '1234AB', 'Flaatsnummer' with the value '1', and 'Toevoeging'. Below the fields is a message: 'Sorry, er ging iets mis bij het ophalen van je adres. Neem alstublieft telefonisch contact op om een afspraak te maken.' At the bottom is a dark blue button labeled 'VOLGENDE'.

The screenshot shows the fifth step of the appointment process. At the top left is the RRS logo and the phone number 093-4282741. The title is 'AFSPRAAK MAKEN VERSTOPPING'. The main heading is '5. WANNEER GAAN WIJ HET OPLOSSEN?'. Below it is a list of four available dates, each with a checkmark icon: 'dinsdag 21 maart 2023', 'woensdag 22 maart 2023', 'donderdag 23 maart 2023', and 'vrijdag 24 maart 2023'. Below the list is a link that says 'Meer datums tonen'. At the bottom is a dark blue button labeled 'VOLGENDE'.

Use of CRO for appointment module

The front-end of the existing appointment module has been completely redesigned.

- The bottlenecks in the old module were identified and appropriate solutions were devised.
- To make the module more attractive than calling, it had to be fast and easy to use. A user test (eye-tracking) was conducted during the construction of the module to validate the ideas.

53% Higher conversion rate

Owner-occupied home zip code identification

Based on own data.

Effective data

The postal code location in the appointment module is matched with RRS' own dataset to determine whether it is a purchased or rented property.

This data is then pushed through the data layer, allowing us to distinguish between rental and purchased properties. See "cash," which stands for purchased properties.

15 postcodeCheck

flat json

```
{  
  "event": "postcodeCheck",  
  "contractType": "Cash",  
  "contractTypeName": "Contant",  
  "postalCode": "7609RD",  
  "postalNumber": "10",  
  "gtm.uniqueEventId": 22  
}
```

Owner-occupied pixel optimization

Based on own data.

Feeding algorithms with qualitative data

When determining the strategy, we considered options that could solve these issues while optimizing the algorithms of Google and Microsoft.

Because we can recognize purchased and rented properties from the data layer, we are able to create separate pixels for each type of property.

Experiment

After creating two separate pixels for each type of property, we set up an experiment.

We tested the existing conversion pixel (which includes all appointments, both rental and purchased) against the new conversion pixel targeted at purchased properties.

The result was a remarkable **14% lower CPA** for the campaign focused on the purchased property pixel!

Ads based on availability service engineers

There is a real-time connection with the service engineers' schedule, which uses the 'Capacity Optimization Script' to optimize automatic targeting of postal code areas based on capacity planning every hour. This provides:

- a solution to the underutilization of the number of service engineers.
- the opportunity to do more work with the same number of service engineers.
- the opportunity to reduce the time spend on the road.

Goals & Results for RRS

Friends of Search 2023.

Goals & Results

Learning

How can we make the next steps?

Learnings

Eventhough this case shows some good results, we came across some interesting learnings.

Learning

- CBS data limited the algorithm → Fixed with separate pixels
- Own zip codes does not always match with Google zip codes → Back-up created with coordinates / city
- Multi-disciplinary work is key to success

Next steps

In order to bring our account further, a couple of next steps have been identified:

Next steps

- Uploading offline conversions, including cancellations
- Dynamic value-bidding
- Personalizing landing experience on-page
- Activation of brandformance strategy

By intelligently integrating **CRO, data, and advertising**, we have not only **optimized marketing goals**, but also **optimized occupancy**.

Unique is the way in which we have used data to reach the target group as targeted as possible.

And all **without limiting the algorithm**.

Thank you!
